

Conditional Probability

changes the denominator

	F	Bk
M	40	22
F	12	16
T	52	38

Bs
15
45
60

"given that"

$$P(\text{Baseball} | \text{Female}) = \frac{45}{73} \approx 61.6\%$$

$$P(F | \text{Baseball}) = \frac{45}{60}$$

$$P(\text{Baseball}) = \frac{60}{150} = \frac{6}{15} = \frac{2}{5} = 0.4 = 40\%$$

$$P(\text{Baseball} \mid \text{Female}) = \frac{P(\text{Baseball AND Female})}{P(\text{Female})}$$

$\frac{45}{73}$

$$= \frac{\binom{45}{150}}{\binom{75}{150}} = \frac{45}{150} \cdot \frac{150}{73}$$

$$= \frac{45}{73}$$

$$P(A|B) = \frac{P(A \text{ and } B)}{P(B)}$$
